Description

Shelving system HI280 – ship shelving – is a special storage area where our standard concept, shelving system HI280, has been further developed to fit into marine use.

The result of this development is a stronger system with a high degree of functionality also during strong movements and strength. The ship shelving system is installed within the mercantile marine as well as many counties navy. Marine storage systems have also been supplied to oil platforms at the north sea with an extremely high demand for secure storage

The shelving system HI280 for marine use has been developed in order to work as a safe and secure storage system in marine environments. This has resulted in design of important accessories in order to avoid stored items to “move around” during rough conditions. The shelving system HI280 has been reinforced and equipped with special front-secure-beams fixed in front of the shelves preventing goods from falling out. Special locked chest of drawers for small components has been developed.

The shelving system is mounted, joint, into the fixtures of the ship for an optimal security. Ship shelving also exist in a design with closed, lockable doors for safe storage. Shipments have been realized to among others NATO war ships, ferries, container ships, tankers , oil platforms and ship yards.
